FOUNDER MARKET-SIZING BRIEF

# India Land Assurance: TAM, SAM and SOM

A focused estimate of the annual revenue pool for verification and transaction assurance - not the value of Indian real estate.

**TAM**
**INR 11,250 cr**
Base annual national spend pool

**SAM**
**INR 2,250 cr**
Ten states + high-risk segments

**5-YEAR SOM**
**INR 126 cr**
Credible annual revenue run rate

## Bottom line

**The opportunity is large enough for a venture-scale company, but only if the service-led entry compounds into recurring monitoring, professional workflow software, institutional APIs and a proprietary parcel-risk graph. A pure manual due-diligence agency is unlikely to produce venture economics.**

## What is included

Paid preliminary risk checks, legal and document verification, field and boundary evidence, transaction coordination, conditional closing support and selected monitoring attachment. The base blended revenue is INR 12,500 per relevant transaction.

## What is excluded

Property value, stamp duty, brokerage commissions, loan principal, insurance premiums, fractional ownership assets and speculative tokenization revenue. This keeps the market size aligned to what the company can actually earn.

| | | |
|---|---|---|
| **TAM** | **9.0m relevant transactions** | **INR 11,250 cr / year** |
| **SAM** | **1.8m target transactions** | **INR 2,250 cr / year** |
| **SOM** | **75,000 paid cases** | **INR 126 cr year-5 ARR** |

## Confidence level

Directional, not audited. The transaction base is anchored to recent state registration volumes. The national document count, sale-transfer mix and willingness to pay remain model assumptions that must be validated district by district.

MARKET MODEL

# How the numbers are built

TAM = national registered documents x sale/transfer share x blended assurance revenue. SAM applies a geographic and high-risk-segment filter. SOM is built bottom-up from district capacity, paid cases and recurring products.

| Scenario | National docs | Sale / transfer | Revenue / case | TAM | SAM |
|---|---|---|---|---|---|
| Conservative | 25.0m | 25% | INR 9,000 | INR 5,625 cr | INR 844 cr |
| Base | 30.0m | 30% | INR 12,500 | INR 11,250 cr | INR 2,250 cr |
| Upside | 35.0m | 35% | INR 16,000 | INR 19,600 cr | INR 4,900 cr |

## Base-case math

TAM: 30.0m registered documents x 30% relevant sale/transfer share x INR 12,500 = INR 11,250 crore annually.

SAM: 20% of TAM volume across Jharkhand, Bihar, Uttar Pradesh, West Bengal, Odisha, Maharashtra, Karnataka, Telangana, Tamil Nadu and Rajasthan, focused on higher-risk transactions = INR 2,250 crore annually.

SOM: 75,000 paid cases across 40 districts at INR 13,500 realized core revenue per case = INR 101.25 crore, plus INR 25 crore recurring revenue = INR 126.25 crore annual run rate in year five.

## Why SAM is deliberately narrow

The target is not every property buyer. It is transactions where uncertainty and willingness to pay are highest: peri-urban plots, agricultural and inherited land, NRI or outstation purchases, developer aggregation and lender collateral files.

## Critical assumptions

1. India processes 25-35 million registered documents annually.
2. Sale and transfer instruments are 25-35% of registered documents.
3. Blended realized revenue is INR 9,000-16,000 per relevant transaction.
4. The ten-state high-risk SAM represents 15-25% of TAM volume.
5. Recurring products contribute INR 7.5-60 crore to year-five revenue.

**The greatest source of error is not the arithmetic. It is the sale-deed share by district and the conversion rate at INR 1,499 screening / INR 14,999 full verification pricing.**

EXECUTION

# What the SOM requires

| Scenario | Districts | Paid cases | Core revenue | Recurring | Year-5 ARR |
|---|---|---|---|---|---|
| Conservative | 20 | 25,000 | INR 27.5 cr | INR 7.5 cr | INR 35 cr |
| Base | 40 | 75,000 | INR 101.25 cr | INR 25 cr | INR 126 cr |
| Upside | 75 | 150,000 | INR 240 cr | INR 60 cr | INR 300 cr |

## Base operating target

Forty active districts, 75,000 annual paid cases and approximately 1,875 cases per district per year - about 156 per month. The model captures only 4.2% of base SAM volume, leaving room for competitors and operational friction.

## Deoghar beachhead

Target 300-1,500 paid cases in the first full year, producing approximately INR 0.3-2.25 crore of service revenue depending on conversion and product mix. This is a validation target, not the national SOM.

## 90-day proof points

- 25 paid cases, not free reports.
- Measurable conversion from INR 1,499 screen to INR 14,999 full case.
- At least 40% gross margin on full verification.
- Seven-working-day median turnaround.
- One repeatable advocate-surveyor operating pod.
- One developer and one NBFC willing to test batch workflows.

## Investor interpretation

**A credible investment case is not 'India real estate is huge.' It is: a focused trust-and-assurance wedge can reach INR 100+ crore annual revenue while creating proprietary transaction outcomes, field evidence and institutional workflow lock-in.**

## Kill signal

If qualified customers will not pay, partner costs prevent 40% gross margin, or case quality cannot be standardized after the first 50-100 cases, pivot toward B2B lender/developer workflows or stop scaling the consumer model.

EVIDENCE AND LIMITS

# Source anchors

Observed state anchors total approximately 15.2 million registered documents annually: Uttar Pradesh about 40 lakh; Tamil Nadu 33.23 lakh; Maharashtra 43.12 lakh; Gujarat 18.95 lakh; and Telangana 16.67 lakh annualized from nine months. These counts include instruments beyond property sales.

Government digitization is advanced but does not create conclusive title by itself. As of November 2025, more than 36 crore ULPIN parcel identifiers had been generated, 97.37% of cadastral maps were digitized and 88.6% of registration offices were integrated with revenue offices. Multiple records and field facts still matter.

## What must be verified next

1. Actual Deoghar and Jharkhand deed-type counts.
2. The share of cases with meaningful legal, boundary or possession complexity.
3. Paid conversion and product-mix data.
4. Field, professional review and customer-support costs.
5. Monitoring, SaaS and API attachment rates before recurring revenue enters forecasts.
