BhumiSetu

India's Land Decision Infrastructure

Master Product Requirements Document

Parts 4 to 6: Ecosystem, Info Architecture, & Website

Document Grade: Investor & Engineering Ready

Date: July 2026

PART 4: COMPLETE PRODUCT ECOSYSTEM

BhumiSetu is not a monolithic application. It is a constellation of purpose-built interfaces orchestrating a central intelligence engine. The ecosystem architecture ensures that specific user contexts (e.g., a surveyor on a muddy field vs. an underwriter in a bank) are served with optimal UX.

1. The Frontends (Interfaces)

- **Website (bhumisetu.online):** The top-of-funnel conversion engine. Optimized for SEO, education, and lead capture.
- **Customer App (PWA & Mobile):** The "Command Center" for retail buyers/sellers. Focuses on transparency, status tracking, payment milestones, and document viewing.
- **Partner App (Mobile-First):** Designed for Surveyors, Lawyers, and Document Agents. Heavily relies on offline-first capabilities, GPS tagging, and camera integration for field data collection.
- **Enterprise Portal (Desktop SaaS):** High-density data views for Banks, NBFCs, and Developers. Built for bulk uploads, API key management, and portfolio-level risk analysis.
- **Admin/Founder Dashboard:** Internal God-mode. Tracks system health, partner liquidity, manual overrides, and top-level KPIs.

2. The Backends (Engines)

- **CRM & Case Management:** The state machine tracking every property evaluation from Lead -> Active Case -> Dispatched -> Analyzed -> Delivered.
- **Knowledge Center:** A headless CMS powering dynamic SEO pages, legal glossaries, and the help center.
- **AI Platform (BhumiCore):** The proprietary orchestration layer consisting of LLMs, RAG pipelines, Vision models, and the Land Decision Knowledge Graph.

PART 5: INFORMATION ARCHITECTURE

The IA is designed to reduce cognitive load. Land diligence is inherently complex; the UI must synthesize this complexity into binary decisions (Red/Yellow/Green).

1. The Land Decision Knowledge Graph (Core Ontology)

Our backend does not use a traditional flat relational structure for core logic. We utilize a graph to map relationships:

- **Node (Parcel):** e.g., Survey No. 45/2. Attributes: Coordinates, Area.
- **Node (Person):** e.g., Ram Singh (Historic Owner), User_101 (Buyer).
- **Node (Document):** e.g., Sale Deed 2018, 7/12 Extract 2023.
- **Node (Event):** e.g., Court Case Pending, Survey Completed.

Edge Example: [Ram Singh] -> SOLD_TO -> [Shyam] -> SUPPORTED_BY -> [Sale Deed 2018] -> APPLIES_TO -> [Survey No. 45/2].

2. App Navigation & Hierarchy (Customer App)

- **Home:** Active Cases (Cards) | Initiate New Diligence (CTA) | Recent Alerts
- **Portfolio (My Parcels):** List of tracked lands | Trust Scores | Subscribed Monitoring
- **Case Detail View (Deep Dive):**
  - Timeline / Progress Bar (Document Collection -> Legal Review -> Field Survey -> Final Report)
  - Digital Vault (Original Docs vs. AI Summaries)
  - Action Required (Pending payments, missing signatures)
- **Support:** AI Chatbot (Context-aware of active case) | Escalate to Human

PART 6: EVERY WEBSITE PAGE (Specs)

The public website is a conversion machine. It must convey authority, trust, and technological superiority.

1. Homepage (bhumisetu.online)

Attribute	Specification
Objectives	1. Establish category leadership. 2. Capture lead (Search by Survey No. / State). 3. Segment users (Retail vs. Enterprise).
User Flow	Hero -> Social Proof -> How it Works -> Interactive Demo -> Pricing -> Lead Gen Form.
SEO & Schema	Target: "Land verification India", "Check 7/12 online", "Property legal check". Schema: `Organization`, `SoftwareApplication`.

Wireframe & Components:

- **Hero Section:**
  H1: "Don't Buy Land on Blind Trust. Buy on BhumiSetu."
  Sub: India's first AI-powered Land Decision Platform. We combine government data, legal experts, and satellite intelligence to give you absolute certainty.
  CTA (Primary): "Check a Parcel (Free)" - Input field for State + District + Survey No.
- **Trust Bar:** Logos of NBFCs, total parcels analyzed, ₹ value of land secured.
- **Interactive Component (The "Aha" Moment):** A slider showing a raw, unreadable vernacular document transforming into a clean, English BhumiSetu Trust Report.

2. Solutions Page (Retail Diligence)

Attribute	Specification
Objectives	Detail the exact process of the 'Complete Land Diligence Protocol'. Overcome objections about cost.
Copy Hierarchy	Focus on the Pain (Fraud, Encroachment) -> The Antidote (Our Process) -> The Deliverable (The Trust Report).
Loading State	Skeleton loaders for case study statistics.

3. Pricing Page

> **Model Improvement: Transparent, Value-Based Tiers**
>
> The real estate industry is notorious for hidden fees. We will publish exact pricing. We don't sell hours; we sell outcomes.

- **Tier 1: Digital Health Check (₹2,999):** AI-driven document analysis, 30-year encumbrance check via digital registries. Delivery: 24 Hours.
- **Tier 2: Field Verification Protocol (₹14,999):** Tier 1 + DGPS physical boundary survey + Lawyer signed title-search report. Delivery: 7 Days.
- **Tier 3: Enterprise API:** Volume-based pricing for Banks. "Contact Sales".

4. Enterprise Portal Page

Attribute	Specification
Objectives	Convert B2B leads (Banks, Solar, Infra).
Components	API Code Snippet block, Case Study (e.g., "How ABC NBFC reduced LAP disbursement time by 80%"), ROI Calculator.
CTAs	"Book a Technical Demo", "Read API Docs".

5. Technical States (Global)

- **Error State (404/500):** "We couldn't find this parcel on the map, but our ground team can." (Include search bar and contact form).
- **Loading State:** Instead of a spinning wheel, show dynamic text: "Querying Land Records...", "Running Legal AI Models...", "Triangulating Coordinates..." (Increases perceived value).
