BhumiSetu

India's Land Decision Infrastructure

Master Product Requirements Document

Parts 7 to 11: Dashboards, CRM, & Case Management

Document Grade: Investor & Engineering Ready

Date: July 2026

PART 7: CUSTOMER DASHBOARD

The Customer Dashboard is designed to reduce the "Fear of Ruin." It must project extreme transparency and institutional certainty. The core UX principle is: *Progress over Data Dump*.

1. Dashboard Home

- **Hero Widget (Active Case Status):** A massive, easy-to-read progress bar. States: *Awaiting Documents -> Legal AI Review -> Field Verification -> Final Report Generation*.
- **The BhumiSetu Trust Score:** A dial (0-100) indicating current confidence in the parcel. *Example: Score is 85/100, deducting 15 points because physical boundaries deviate 2% from registry.*
- **Recent Activity Feed:** Chronological updates (e.g., "Our partner surveyor Amit just checked in at your site", "Document Agent finished translating the 7/12 extract").

2. Case Detail & Map View

- **Interactive Map:** Superimposes the digital government boundary (cadastral map) over high-res satellite imagery, showing exact polygon boundaries.
- **Risk Heatmap:** Highlights specific encumbrances (e.g., a red tag on the map if an access road is disputed).

3. Document Vault

- **Side-by-Side Viewer:** Left pane shows the scanned vernacular document. Right pane shows the AI-structured English summary with highlighted risks.
- **Human Verification Badge:** "Verified by Adv. R. Sharma (Bar Council ID: 49583)" attached to critical documents.

PART 8: PARTNER DASHBOARD (APP)

Designed for Surveyors and Lawyers. It must operate flawlessly on mid-range Android devices, often in remote locations with zero internet connectivity.

1. Task Feed & Discovery

- **Radar View:** Map showing available diligence tasks within a 50km radius. Includes payout amount and SLA (e.g., "Verify boundary for ₹2,500 - Due in 48 hrs").
- **Acceptance Flow:** One-tap acceptance with immediate GPS directions to the parcel.

2. Execution Engine (Offline-First)

> **Model Improvement: Anti-Fraud Execution**
>
> To prevent "armchair surveying" (surveyors faking visits), the app enforces strict geofencing. The camera will only unlock to take site photos if the device GPS matches the target parcel coordinates within a 10-meter radius.

- **Guided Workflow:** App dictates the process: Step 1: Walk the perimeter (records GPS trail). Step 2: Photograph all 4 corners. Step 3: Interview adjacent owner (record audio).
- **Auto-Sync:** Data is cached locally and automatically pushed to AWS S3 when the device regains 4G/5G connectivity.

3. Earnings & KYC

- **Ledger:** Real-time view of pending, processing, and cleared payouts. Same-day UPI settlement post-QA approval.
- **KYC Profile:** Upload Bar Council IDs or Surveyor Licenses for internal BhumiSetu verification.

PART 9: FOUNDER / ADMIN DASHBOARD

The "God Mode" for the operating team. Built to monitor system health, unit economics, and unblock edge cases.

1. Command Center (Live Map)

- Real-time visualization of India with pulsing dots representing active API requests, active field surveyors, and pending legal reviews.
- **Marketplace Liquidity Metric:** "SLA Risk Index" - Flags regions where task volume exceeds available partner capacity.

2. AI & System Health

Metric	Description
LLM Cost per Case	Tracks API spend (OpenAI/Anthropic) per diligence packet. Target: Under ₹20.
RAG Hallucination Rate	Percentage of AI document summaries that required manual correction by internal QA.
Average TTR	Time-to-Resolution. Tracked from Lead Creation to Final Report Delivery.

PART 10: COMPLETE CRM

We do not use Salesforce. BhumiSetu requires a custom, hyper-specialized CRM deeply integrated with our AI state machines and partner network.

1. Lead Lifecycle & Scoring

- **Statuses:** `New` -> `Enriching` (AI fetches basic registry data) -> `Qualified` -> `Payment_Pending` -> `Active_Case`.
- **Lead Scoring:** B2B leads are scored based on the size of the land portfolio and entity type (e.g., Solar Developer = Score 95, prioritized for human sales contact).

2. Omnichannel Automation

- **WhatsApp Integration:** The CRM automatically fires localized WhatsApp messages triggered by Case State changes (e.g., "नमस्ते, your surveyor has reached the site.").
- **Task Queues:** If AI fails to parse a heavily damaged document, the CRM routes it to a human "Exception Handler" queue.

PART 11: CASE MANAGEMENT WORKFLOWS

The core operating system of BhumiSetu. It acts as a deterministic state machine, ensuring consistency.

1. The "Tier 2: Field Verification" Workflow

1. **Initiation:** Customer pays ₹14,999. Case state: `INITIATED`.
2. **Document Intelligence (T+0):** AI Workflow Agent fires. Scrapes state portals for 7/12, mutation entries, and registry data. Document Agent parses and structures the data.
3. **Legal Triage (T+1):** If AI flags `disputed_title = true`, case routes to internal Senior Lawyer. If clean, proceeds.
4. **Field Dispatch (T+2):** Workflow Agent pings Partner App. Broadcasts survey job to top 3 rated surveyors within 20km.
5. **Execution (T+3):** Surveyor accepts, visits site, completes geofenced photo checklist, and submits.
6. **Synthesis (T+4):** AI Decision Agent ingests Field Data + Legal Data. Compares physical area vs. registry area. Generates draft *BhumiSetu Trust Report*.
7. **QA & Delivery (T+5):** Human lawyer reviews draft, applies digital signature. State changes to `DELIVERED`. Dashboard updates.

2. SLA & Escalations

If any step breaches its timeline (e.g., Surveyor does not visit within 48 hours), the Case Management system automatically triggers an escalation, re-assigning the task and alerting the ops team.
